EXPANSION

The project has been approved by the Mozambican Government for 10 Luxurious bungalows therefore on the principle 7 more bungalows can be built without asking any permission. With 80 hectares there is also plenty more space

Infrastructures already there:

During the construction phase, the owners and builders have been investing a lot on underground services. Thus, there are already in place water pipes, sewer pipes and electrical cable for extra 4 bungalows. Also, the bush camp underground services and location can be easily used and converted into 3 more bungalows (all as per the initial plot plan).

Relation with the community:

Last but not least, the relations with the communities around are extremely good, easy and simple. Employing only people from the neighboring villages, buying as much as possible from the locals (fish, seafood, vegetables and fruits), being largely involved in the primary school development (we focused on improving the working conditions by several construction, by financing school material, by developing a library etc..) created not only fair relations but also a strong and natural protection from ill-intentioned acts. The lodge is extremely well seen in the village.
